RURAL ENGAGEMENT

RURAL POLICY

RURAL MUNICIPAL COUNCILLOR PROFILE

Are we seeing participation in rural Ontario municipal politics from a diverse talent pool? e there sufficient candidates to foster a healthy, competitive environment in local elections? ew councillors feel prepared to carry out their roles and responsibilities?

Non-metro employment trends

amployment is now lower than the peak in 2008 — it is back to the level in 2002.

Non-mero employment is now lower than the peak in 2006 – it is back to the level in 2002.

Generally, the level of non-metro employment has fluctuated but has been essentially flat with no increasing and no decreasing tend in the past 10 years.

This flut annihument transf exists in each non-metro economic regime, exceed in the

no increasing and no decreasing trend in the past 10 years.

This flat employment trend exists in each non-metro economic region, except in the Northwest Economic region which has been persistently declining during the past 10 years. data for Economic Regions (ERs)³. Employment in the diratford-Bruce Peninsula ER peaked at 164 thousand in February, 2005 (Figure 2). In August, 2015, the level was tower 152 thousand) which is the same level as in February, 2001. Hence, we see a generally frat employment trajectory.

Why took at employment trends?

Employment is a key indicator of overall levels of
economic activity. Since employment income is the
most important source of income for most holds, it can drive local purchasing and savings Businesses may find it more or less difficult to

tent peaked in non-metro2 areas at 1.29 million in November, 2008 and then decined to 1,23 million in March, 2010 (Figure 1) increases attained between 2011 and 2012 were not sustained. In August, 2015, employment had declined to 1.22 million, the lowest level since December, 2002.

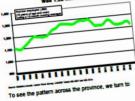

→59±8trs-Ervox Pasinsula Economic Region, Onlario

Employment in the Northwest ER was 99 thousand in August, 2015, which is lower than in any period before 2011 (Figure 3). Employment levels have been generally decining over the past 10 years. Employment in the Northeast ER has varied between 230 and 255 thousand in the years since 1986

(Figure 4). The level has been essentially flat in the last 10 years.

In the Muskoka-Kawarthas ER, the employment level has varied in the range between 165 thousand and

find new employees, depending upon the share of the potential labour force that is employed.
